

**Co\*STAR delivers superior host integration to your Windows and Web applications. Co\*STAR is a great host connectivity product, and is in production mode on thousands of machines world wide, BUT...**

While legacy applications continue to run as stable platforms, customer expectations and needs continue to evolve. New needs are driven by desktop and web applications and equipment that become more sophisticated. CoSTAR host integration features allow you to tightly integrate your legacy applications with contemporary desktop window applications.

**Co\*STAR integration saves you money by:**

- o Enabling high-end **Windows / Windows Application integration** without expensive re-writes or porting of your core legacy application.
- o Providing the ability to **share information and business logic** between previously non-integrated systems such as market and supplier applications, as well as legacy databases and Microsoft implementations.
- o Shortening the training cycle on your core application by **presenting it in a familiar Windows context**. Users have been conditioned to expect Windows functionality and Co\*Star delivers that functionality.
- o Using **existing communications**. The legacy application does not need to incorporate low level protocols such as those required by Winsock, TCP/IP, Net Bios, NetBui, etc to exchange data.
- o **Minimizing interface impact and bandwidth traffic** on the Host system. All the windows components reside on the desktop machine, Co\*STAR manipulates data output from the host application and business logic and makes it available in your defined presentation.
- o Providing user functionality that is no longer captive to the workflow of the host

application. Removing this constraint provides the potential to make **productivity gains** by giving you the ability to make the process meet your desired flow.

- o Providing economical connections (LAN, Wan, Serial or Browser based) are **economical to license and economical to maintain**. When used in a Co\*Star server configuration, a smaller number of concurrent seats can be made available to a larger population of users.

Co\*STAR combines several applications in this web enabled user interface. Find out how Co\*STAR can boost your application's productivity.

There are many more reasons to look at upgrading to Co\*STAR integration. The best way to learn how these features affect your company is to work with us on a demo arrangement. For more information contact us.

Clearview Software International is a leading provider of software tools and services that create effective user interfaces to diverse, commercial applications. With Co\*Star as its core technology, Clearview Software has effectively integrated host based, Windows and legacy applications on over 150,000 systems in local, LAN, WAN and Internet architectures. Co\*Star helps application developers, worldwide, to easily provide full Windows functionality and repurpose existing applications without altering their core application code. The Company, founded in 1992, is headquartered at 326 Chestnut Hill Road, P.O. Box 1370, Amherst, N.H. 03031, with sales offices in Chicago, Canada, England, and New Zealand.
